PROFILE

I am a hardworking and analytical individual who possesses strong problem-solving skills and a drive to learn new things. I have advanced knowledge in repairing, programming, operating systems, and web development. I am constantly looking to improve myself while growing in the computer science and technology fields.

EXPERIENCE

- . Freelance Web Developing using JS, Python, HTML, CSS, NodeJs.
- . Implemented CMS systems and e-commerce shopping carts through open source platforms Wordpress.

PROJECT

#1 AMDB - Actor/Movie Database - We has been created as a database to search actors/actresses or movies and be provided with a detailed description, trailer and movie information, and connections to GIFs that are correlated to the searched item to be shared with friends throughout social media.

<https://github.com/vi3t4lov3/GRP12-The-Movie-Finder>

Technologies include: Javascript, APIs, HTML, CSS & Foundation framework.

#2 Stock Alert Tracker - We're creating an app that users can log in with their personal credentials. As an investor, I should be able to create alerts for specific stocks of my choice and add them to a list. I should be able to follow other alerts created by other users. These alerts will send a message or a text when a stock goes up or down to a particular price target specified by the user.

<https://github.com/Danquest/15-Project2-Stock-Alert-Tracker>

Technologies include: Javascript, NodeJS , Express, MySQL, Sequelize, Handlebars & Bootstrap framework.
